

OTHER INFORMATION

SECTION 7

Other Information

In addition to the reference projects included in Attachment 2, Moffatt & Nichol's Orlando office is currently providing on-call services under the following contracts:

FDOT DISTRICT 5 CONTINUING SERVICES CONTRACT FOR ROADWAY DESIGN

This task-based miscellaneous design contract can include all project types from roadway design and rehabilitation, drainage improvements, signalization, and safety improvements. Current projects include resurfacing, intersection safety improvements, and new signals.

FDOT DISTRICT 5 DISTRICTWIDE QUALITY ASSURANCE PLAN REVIEW

Moffatt & Nichol performed quality assurance reviews for FDOT District 5. As part of this contract, Moffatt & Nichol's Lake Mary staff reviewed plans by the District and outside consultants for conventional and design-build contracts. The firm helped confirm that all plans reviewed were biddable and constructible. The team checked all plans against the FDOT Plans Preparation Manual, FDOT Design Standards, FDOT Standard Specifications, as well as other industry standards. The firm used the FDOT Electronic Review Comments System to enter the comments on each set of plans and gave feedback on recurring comments that needed to be addressed during the quality forum.

CITY OF ALTAMONTE SPRINGS CONTINUING TRANSPORTATION ENGINEERING SERVICES

Under an on-call contract for the City of Altamonte Springs, Moffatt & Nichol completed the Jamestown Boulevard Intersection project. This project involved designing intersection improvements at Jamestown Boulevard and Montgomery Road. This task began with an alternatives study phase that included review of historical plans and permit documents and finished with delivery of signed and sealed construction drawings, avoiding the need for any right-of-way. The design included adding a right-turn lane to Jamestown Boulevard, drainage structure modifications to accommodate curb realignment, sidewalk reconstruction, Americans with Disabilities Act improvements, and signing and marking design. Additional services included design and utility survey, utility coordination, subsurface utility engineering, and permit preparation.
