Subject: RE: Mill Creek Road Washout

I rode out to the area mentioned below, and found the roads to be completely, without question, passable for ALL traffic. I talked to Mr. Sommer on the phone, (because his property is gated and the gate was closed), and he explained his concerns and told me that he knew what I was going to say because I had talked to him numerous times before. I once again told him that the only thing that was going to control the washing and all around poor condition of the road, was for it to be paved. I started explaining our special assessment program and he stopped me and said they tried that a few years ago, and the county backed out on them due to lack of funds. I told him that I was sorry to hear that, but all I could do was put him in touch with that dept. again to discuss the possibility of moving forward. Mr. Sommer then asked could I send a grader out there to grade the road again and I told him no because it meets our pass ability policy and he knows that after the next rain, it will be washed again, just like it is now. He said he knew that. I told him I would pass along our conversation.

Randy, please take a look at the roads " feeding Mill Creek road and Natures Edge road" from the email below and let me know your findings. Anything impassable?

Thank you,
Lori

> Welton, I am writing you again, to ask for your help, to improve the roads feeding Mill Creek road and Natures Edge road. We have been putting up with the constant erosion of the road for years now and it is getting worse. I have my wife's 87 year old parents stay with us, and as a Safety issue, I am afraid that emergency vehicles and service vehicles will not be able to respond when needed. I pay more than \$2400 a year in taxes and I don't have city water, paved roads or city sewer. Some type of water management system has to be installed or the quick fix method of improvements, will just wash away with every rain storm. I would love for you to take a ride out there and see for yourself what we deal with everyday. I can be reached at 352 455-1887. Thank You for your help !!! Roy Sommer
