General Description OF APPLICATION NO.4-069-0326AM2-ERP:

This application is for a surface water management system consisting of a residential development with 96 lots. The surface water management system includes 20.16 acres, which discharge to the existing retention ponds within the master drainage system.

Existing Land Use: Abandoned citrus grove

Hydrologic Basin(s): 07

Receiving Water Body(ies): Lake Felter Class:III

Easements/Restrictions: N

Operation and Maintenance Entity: Homeowners Association

Staff Comments:

The project is located approximately 3 miles south of Clermont on the east side of US Highway 27 (see attachment # 1).

A stormwater permit #42-069-1062 was issued for Phase I of the Kings Ridge development on June 28, 1995, this permit authorized the construction of a stormwater system consisting of a 17.85-acre project including an entrance road, model homes, and sales center. A standard general permit (40-069-0196A) was issued for phase II. Phase II of the project consisted of three dry-retention ponds and two, existing, dry retention ponds (two depressional areas), and one temporary dry retention pond. Phase III of the project (4-069-0326) consists of a residential development with 145 lots and 11 holes of golf for a future 18 hole golf course. The surface water management system for phase III includes 299.27 acres of area (38 acres of subdivision and 261.27 of mass grading and 10 retention ponds). Phase IV of the project is the Wellington subdivision.

Wellington consists of 96 lots, approximately 3155 linear feet of road, and a associated surface water collection and conveyance system. This project lies within the Kings Ridge Planned Unit Development, for which a master surface water management system has been previously permitted and constructed as part of Kings Ridge Phase IV. Under the post-development condition, the existing surface water management system has been designed to retain the entire run-off generated by the 25-year 96-hour storm event on-site, and recover the total volume within fourteen (14) days. The system is also designed to provide the required water quality treatment, and recover this volume within seventy-two (72) hours following the storm event. The proposed construction has no encroachment to a flood plain area. The site is located within the Ocklawaha River Hydrologic Basin. The design, as proposed, meets the applicable Ocklawaha Basin criteria. Most of the system has been constructed. The applicant has demonstrated that the existing surface water management system will provide treatment and recovery of the required pollution abatement volume, and volume storage of runoff, pursuant to chapter 40C-42, 40C-41, and 40C-4, F.A.C, for the proposed modifications in the application.

The proposed project site consists of abandoned citrus groves, which are vegetated with planted slash pines and a variety of upland grasses. There are no wetlands within the project area.

Staff has determined that this project conforms with the wetland review criteria pursuant to Section 12.2.2 of the Applicant's Handbook.

Staff believes this project, as proposed, is consistent with the objectives and criteria of the District set forth in Chapters 40C-4, 40C-41, and 40C-42, F.A.C.
