PREPARED BY:

GRIFFEY ENGINEERING, INC.
406 NORTH CENTER STREET
EUSTIS, FLORIDA 32726

OCTOBER 2014

RAI QUESTION 1

1. *The proposed project includes the construction of roadway improvements to an approximate 5.5-acre portion of Johns Lake Road. Stormwater runoff generated by the road will be conveyed via a piped conveyance system to existing Pond A of Lost Lake Reserve, which will be expanded under this permit. Pond A was designed to retain the entire runoff volume generated by the 25-year, 96-hour storm event under Permit No. 40-069-76138-2, which is proposed for modification under this permit.*

Insufficient information was provided to verify whether Pond A, as modified, is sufficiently sized to retain the entire runoff volume generated by the existing development and proposed roadway improvements for consistency with the master system design. Accordingly, please address the following:

- a. *The submitted volumetric analysis indicates that the pre-post difference in runoff volume generated by the 25-year, 96-hour storm event is 7.05 ac-ft and that the pond will retain 13.07 ac-ft at elevation 105.3 feet (road inlet overflow). The road is located in land locked basins for Lost Lake, Lake Felter and Eagle Lake; however, the analysis provided does not appear to account for the diversion of runoff from Basins Lake Felter and Lost Lake to Eagle Lake, for which Pond A is located. Accordingly, please revise the volumetric analysis based on the drainage basin for Eagle Lake in demonstrating that the proposed roadway improvements will not result in adverse impacts to adjacent property not owned by the applicant.*

RESPONSE:

The proposed pond modification does account for the diversion of runoff from Basins Lake Felter and Lost Lake to Eagle Lake. All of the new 25 Year - 96 Hour storm runoff generated by the proposed roadway improvements will be totally retained in the pond.

EXISTING RUNOFF VOLUME

A portion of the existing Johns Lake Road currently drains to the pond and is accounted for in the existing pond. Its basin area and 25Y-96H volume are shown below. The rainfall depth used in these calculations for the 25 Year – 96 Hour storm event is 11.2”.

JLR3

DESCRIPTION	AREAS		CN
	SF	ACRES	
Road & R/W - CN from permitted calcs	111,802	2.57	66
TOTAL AREA	111,802	2.57	
		CN:	66.0
		25Y-96H Q(in) =	6.75
		25Y-96H Q(ac-ft) =	1.444

PROPOSED RUNOFF VOLUME

In the proposed condition, JLR3 will have an increased impervious area and therefore an increased 25Y-96H volume. The basin area and runoff volume are shown below:

JLR3

DESCRIPTION	AREAS		CN
	SF	ACRES	
Road & R/W - 76% Pavement / 24% Grass	113,760	2.61	84
Pasture - Good Condition	15,408	0.35	39
TOTAL AREA	129,168	2.97	
	COMPOSITE CN:		78.6
	25Y-96H Q(in) =		8.49
	25Y-96H Q(ac-ft) =		2.098

$$\text{JLR3 25Y-96H INCREASE} = 2.098 - 1.444 = 0.654 \text{ ac-ft}$$

The rest of the Johns Lake Road project is a new contributing area that did not previously flow to the pond. All of the 25 Year – 96 Hour runoff from these areas will be retained in the expanded pond. Those areas and runoff volumes are shown below.

JLR4

DESCRIPTION	AREAS		CN
	SF	ACRES	
Road & R/W - 76% Pavement / 24% Grass	107,505	2.47	84
Rural Residence - 15% Imperv / 85% Grass	101,272	2.32	48
TOTAL AREA	208,777	4.79	
COMPOSITE CN:			66.5
25Y-96H Q(in) =			6.83
25Y-96H Q(ac-ft) =			2.727

JLR5

DESCRIPTION	AREAS		CN
	SF	ACRES	
Road & R/W - 76% Pavement / 24% Grass	90,218	2.07	84
Residential - 1/2 Acre Lots - 25% Imperv	64,506	1.48	54
Rural Residence - 5% Imperv / 95% Grass	230,327	5.29	42
TOTAL AREA	385,051	8.84	
COMPOSITE CN:			53.9
25Y-96H Q(in) =			4.98
25Y-96H Q(ac-ft) =			3.671

The total new 25 Year – 96 Hour runoff volume that needs to be added to the existing pond is:

$$\text{Volume} = \begin{matrix} \text{JLR3} \\ \text{Increase} \end{matrix} + \begin{matrix} \text{JLR4} \\ \text{Total} \end{matrix} + \begin{matrix} \text{JLR5} \\ \text{Total} \end{matrix}$$

$$\text{Volume} = 0.654 + 2.727 + 3.671 = 7.052 \text{ ac-ft}$$

EXISTING POND VOLUME

The existing storage of the permitted retention pond (Pond A) is 6.028 Ac-Ft. The calculations for the pond volume are shown below.

Elev.	Δd (FT)	Area (SF)	Avg.Area (SF)	ΔV (CF)	ΣV (CF)	ΣV (AC-FT)
100		24,338			0	0.000

105		62,556			241,539	5.545
	1		65,756	65,756		
106		68,956			307,295	7.055

VOLUME PROV.	VOLUME (AC-FT)	ELEV.
	5.545	105.00
==>	6.028	105.32
(AC-FT)	7.055	106.00

PROPOSED POND VOLUME

The proposed storage of Pond A is 13.810 Ac-Ft. The calculations for the pond volume are shown below.

Elev.	Δd (FT)	Area (SF)	Avg.Area (SF)	ΔV (CF)	ΣV (CF)	ΣV (AC-FT)
89		9,948			0	0.000
	1		11,163	11,163		
90		12,377			11,163	0.256
	1		13,694	13,694		
91		15,010			24,856	0.571
	1		16,425	16,425		
92		17,840			41,281	0.948
	1		19,350	19,350

97		34,729			170,966	3.925
	1		36,640	36,640		
98		38,551			207,606	4.766
	1		40,518	40,518		
99		42,484			248,123	5.696
	1		44,507	44,507		
100		46,530			292,630	6.718
	1		48,609	48,609		
101		50,688			341,239	7.834
	1		52,823	52,823		
102		54,958			394,062	9.046
	1		57,149	57,149		
103		59,340			451,211	10.358
	1		61,585	61,585		
104		63,829			512,796	11.772
	1		66,125	66,125		
105		68,420			578,920	13.290
	1		70,768	70,768		
106		73,115			649,688	14.915

VOLUME PROV.	VOLUME (AC-FT)	ELEV.
	13.290	105.00
==>	13.810	105.32
(AC-FT)	14.915	106.00

The increased storage volume of Pond A is the difference between the proposed pond and the existing pond. The increased volume is: $V = 13.810 - 6.028 = 7.782$ Ac-Ft. The volume needed to retain all of the 25 Year-96 Hour storm runoff generated by the new contributing area is 7.052 Ac-Ft.

As shown above, the pond is being enlarged to provide an additional volume in excess of the new 25Y-96H runoff volume being added to it. This is a total volume increase that does not account for any percolation effects during the storm event. By adding the total volume increase to the pond, the proposed roadway improvements will not result in adverse impacts to adjacent property not owned by the applicant.

RAI QUESTION 2

- Please provide supporting documentation for the design of the proposed cross drains at Stations 116+40 and 133+00. In particular, provide a drainage basin map for each cross drain and include the curve number and time-of-concentration assumed in evaluating the flow rate from each drainage area. Include sufficient information demonstrating that the existing hydraulic conveyance system will be maintained following construction of the proposed roadway improvements.*

RESPONSE:

The requested analysis was performed. The input data and results are presented below.

OFFSITE BASINS

The offsite basin areas and time of concentration flow paths were delineated for the existing and proposed conditions.

NODAL DIAGRAM

SUMMARY OF RESULTS

The west and east basins for the offsite area were analyzed using ICPR software for both the 10 Year-24 Hour and 25 Year-24 Hour storm events. Each basin was evaluated for the upstream peak stage, the downstream peak discharge and the downstream total discharge. The summary results (below) show that the existing hydraulic conveyance system will be maintained without any impact to upstream or downstream properties. Detailed input and output reports from the ICPR runs follow.
