Scott,

We are NOT "changing means and methods" we are simply asking for your cooperation with resident complaints to save all of us from unnecessary phone calls. As with all of our contracts, we do our best at building these projects as seamless as possible. I have no doubt that Pospiech Contracting can obtain all necessary densities without using vibratory just as all of our other contractors have in the past.
Thanks for your cooperation.

Subject: RE: Vibratory Compaction

Terry,

We have only been using the vibratory equipment to obtain densities required per the specifications. Please advise if the County is directing us to change our means and methods of how to obtain the required densities so we can price accordingly.

Thanks,

Scott Smith

Subject: Vibratory Compaction

Scott,

Can we please stop vibratory compacting? Joe and Mark has asked Jimmy to static roll only and he is refusing. We have been getting several complaints today and last week of houses getting damaged. Jeff is in the process of getting some vibration monitoring equipment on-site to document the readings.
Thanks.

Jeff,

We have been on site since January using the same compaction methods and the vibration issues with local residents has only been an issue here recently. Pospiech Contracting is very much a team player and encourages a "Team" mindset. We appreciate everyone's cooperation throughout this project as there have been many changes.

It is my understanding that seismic monitoring has been performed and the findings are minimal. We will contact the concerned homeowners and address the issues.

Thanks,

Scott Smith

Scott, we tried to help avoid potential claims, however, based on this email and conversations in the field you guys have no interest. You know there are ways to get compaction without vibrating, smaller lifts, bigger roller, it is all relative. There is not a cost for doing what it right. Tierra has been out there partnering with Pospiech, taking tests for QC when they are not available and doing what we can do help the process. Apparently everything associated with your participation comes with a cost. From this point forward, we will follow the specifications without waiver. Proper lift thicknesses, proper procedures to achieve compaction before you place the next lift. You will need to have QC present for your operations, and the QC person will be required to have the proper calibrated equipment. We have now just become more of a CEI firm. We will provide the homeowners with your insurance carrier and you can deal with them. Who is your Risk Management contact person?
